

Innovative PM components Headbox systems *PAMA head*

- Sliding lamella
- Variable jet geometry
- Dilution water technology

High turbulence headbox

Benchmarking

Advantages of PAMA component

- Compact mixing units between manifold and headbox
- Variable jet geometry by swivelling headbox parts
- Sliding lamella to influence the formation during production as well (optional)
- Adjustment of the slice lip extension over the paper width possible (optional)
- Diffuser block completely made of stainless steel
- Bending compensation by adjustable pretension (optional)
- Adjustable bottom lip to change the jet geometry (surface sliding)
